Objective

Gain experience in a position utilizing skills and education in Computer Science in order to grow into a more competent software and web developer.

Summary

- Languages: Python, Java, C++, Javascript, HTML, CSS, SQL, bash
- Frameworks: Django, JQuery, Prototype, Bootstrap, YUI
- Version Control: Git, Subversion (SVN)
- Software: Linux, Fedora, i3wm, Sublime Text, Vim, MySQL, Apache, Node.js
- Concepts & Conventions: OOD, REST, Pep8, W3C, Responsive Web Design

Experience

Solutions Developer, Morris Technology

Statesboro, GA — August 2012 - Present

Develop and maintain multiple multimedia and newspaper websites for companies owned by Morris Multimedia. These websites are made using Python and the Django framework with source code managed using the version control system SVN.

Accomplishments

- Developed widgets using Python, HTML, CSS, Javascript, and the Django templating framework for customers to “drag and drop” onto their websites
- Built multiple websites based on mockups provided by customers
- Used Javascript and the Prototype framework along with AJAX to create optimized event handling functions and server calls
- Wrote new and improved existing backend queries that efficiently retrieved and stored data in a MySQL database
- Created bash/shell scripts to automate repetitive tasks and increase workspace productivity
- Regular involvement in code review sessions amongst co-workers
- Maintained and contributed to a live production repository via SVN

Junior IT Consultant, Savannah IT Associates

Savannah, Georgia — August 2006 - May 2008

- Interacted with customers and managed customer expectations
- Assisted customers with general computer related issues
- Managed networks, installed software and drivers, removed viruses, and cleaned computers
- Built custom computers and added/removed/repaired hardware

Education

Georgia Southern University
